LICENSE INFORMATION

The Programs listed below are licensed under the following License Information terms and conditions in addition to the Program license terms previously agreed to by Client and IBM. If Client does not have previously agreed to license terms in effect for the Program, the International Program License Agreement (i125-3301-15) applies.

Program Name (Program Number):
IBM InfoSphere Data Replication V11.4.0.5 (5725-E30)
IBM InfoSphere Data Replication for Non-Production Environments V11.4.0.5 (5725-E30)

The following standard terms apply to Licensee's use of the Program.

Supporting Programs

Licensee is authorized to install and use the Supporting Programs identified below only to support Licensee's use of the Principal Program under this Agreement. The phrase "to support Licensee's use" would only include those uses that are necessary or otherwise directly related to a licensed use of the Principal Program

or another Supporting Program. The Supporting Programs may not be used for any other purpose. A Supporting Program may be accompanied by license terms, and those terms, if any, apply to Licensee's use of that Supporting Program. In the event of conflict, the terms in this License Information document supersede the Supporting Program's terms. Licensee must obtain sufficient entitlements to the Program, as a whole, to cover Licensee's installation and use of all of the Supporting Programs, unless separate entitlements are provided within this License Information document. For example, if this Program were licensed on a VPC (Virtual Processor Core) basis and Licensee were to install the Principal Program or a Supporting Program on a 10 VPC machine and another Supporting Program on a second 10 VPC machine, Licensee would be required to obtain 20 VPC entitlements to the Program.

Supporting Programs:

IBM DB2 Advanced Workgroup Server Edition for Linux UNIX and Windows
IBM Data Server Client
IBM InfoSphere Data Replication Management Console
IBM InfoSphere Data Replication Access Server
IBM Db2 Standard Edition
IBM Db2 Server Client
IBM MQ

Prohibited Components

Licensee is not authorized to use any of the following components or functions of the Program:

CDC for Db2 for z/OS Remote Source
VSAM for z/OS Remote Source

Non-Production Limitation

If the Program is designated as "Non-Production", Licensee can only use the Program as part of Licensee's internal development and test environment for internal non-production activities.

Components Not Used for Establishing Required Entitlements

Licensee may install and use the following Program components, under the license terms, but these components are not used to determine the number of entitlements required for the Program.

IBM InfoSphere Data Replication Management Console
IBM InfoSphere Data Replication Access Server
IBM Db2 Advanced Workgroup Server Edition for Linux, UNIX and Windows
IBM Db2 Server Client
IBM Db2 Standard Edition
IBM Db2 Server Client
IBM MQ

Modifiable Third Party Code

To the extent, if any, in the NOTICES file IBM identifies third party code as "Modifiable Third Party Code," IBM authorizes Licensee to 1) modify the Modifiable Third Party Code and 2) reverse engineer the Program modules that directly interface with the Modifiable Third Party Code provided that it is only for the purpose of debugging Licensee's modifications to such third party code. IBM's service and support obligations, if any, apply only to the unmodified Program.

Separately Licensed Code

Each of the components listed in the NON_IBM_LICENSE file is considered "Separately Licensed Code" licensed to Licensee under the terms of the applicable third party license agreement(s) set forth in the NON_IBM_LICENSE file(s) that accompanies the Program, and not this Agreement. Future Program

updates or fixes may contain additional Separately Licensed Code. Such additional Separately Licensed Code and related licenses are listed in the applicable NON_IBM_LICENSE file that accompanies the Program update or fix.

Note: Notwithstanding any of the terms in the third party license agreement, the Agreement, or any other agreement Licensee may have with IBM, with respect to the Separately Licensed Code:

(a) IBM provides it to Licensee WITHOUT WARRANTIES OF ANY KIND AND DISCLAIMS ANY AND ALL EXPRESS AND IMPLIED WARRANTIES AND CONDITIONS INCLUDING, BUT NOT LIMITED TO, THE WARRANTY OF TITLE, NON-INFRINGEMENT OR NON-INTERFERENCE, AND THE IMPLIED WARRANTIES AND CONDITIONS OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE;

(b) IBM is not liable for any direct, indirect, incidental, special, exemplary, punitive or consequential damages including, but not limited to, lost data, lost savings, and lost profits.

The following units of measure may apply to Licensee's use of the Program.

Processor Value Unit (PVU)

Processor Value Unit (PVU) is a unit of measure by which the Program can be licensed. The number of PVU entitlements required is based on the processor technology (defined within the Processor Value Unit (PVU) licensing for Distributed Software website at https://www.ibm.com/software/passportadvantage/pvu_licensing_for_customers.htm and the number of processors made available to the Program. IBM continues to define a processor, for the purpose of PVU-based licensing, to be each processor core on a chip. A dual-core processor chip, for example, has two processor cores.

Licensee can deploy the Program (if supported) using full capacity licensing, sub-capacity licensing (<https://www.ibm.com/software/passportadvantage/subcaplicensing.html>), or container licensing (<https://www.ibm.com/software/passportadvantage/containerlicenses.html>). See the linked websites for more information.

Instead of the entitlements required for the Program directly, Licensee must obtain PVU entitlements for this Program sufficient to cover the processor cores for the systems on which the resources managed or processed by the Program reside.

In addition to the above, the following terms apply to Licensee's use of the Program.

Oracle XStream Out Terms

The Program includes the ability to capture change data from Oracle Database, which capability of the Program uses the XStream Out component of the XStream API within Licensee's separately licensed Oracle Database instance (the "XStream Out Components"). Under authority from Oracle, IBM grants Licensee a license to use the XStream Out Components on Licensee's Oracle Database solely to the extent invoked and used by this Program for the purposes of change data capture from Oracle Database to an external database target.

The following terms apply to the XStream Out Components: Oracle or its licensors retains all ownership and intellectual property rights to the XStream Out Components; Licensee may use the XStream Out Components only in conjunction with, and only indirectly through invocation and use by, the Program and only for the internal business operations of Licensee's Enterprise, provided that where the Program is used to facilitate interactions between Licensee and Licensee's customers or suppliers, the XStream Out Components may be used for such purpose if otherwise permitted under this Agreement; Licensee is responsible for

its agents' contractors', outsourcers', customers' and suppliers' use of XStream Out Components to the extent such use is permitted under this Agreement; Licensee may not use the XStream Out Components for rental, timesharing, subscription service, hosting or outsourcing, or make the XStream Out Components available to any third party for use in the third party's business operations; Licensee is prohibited from publicizing any results of benchmark tests run on the XStream Out Components; Licensee may not remove or modify any markings or notices of Oracle's or its licensors' proprietary rights; Oracle has no responsibility to perform any obligations to Licensee under this Agreement except as expressly stated herein, and Oracle will have no liability to Licensee for any damages, whether direct, indirect, incidental, special, punitive or consequential, or for any loss of profits, revenue, data or data use, arising from the use of the XStream Out Components; Oracle is a third party beneficiary of this Agreement. IBM may disclose to Oracle the results of any compliance verification performed by IBM relating to the XStream Out Components; the Uniform Computer Information Transactions Act shall not apply to XStream Out Components; some Oracle programs may include source code that Oracle may provide as part of its standard shipment of such programs, which source code shall be governed by the terms of this Agreement; Third party technology that may be appropriate or necessary for use with some Oracle programs is specified in the Program documentation and such third party technology is licensed to Licensee only for use with the Program under the terms of the third party license agreement specified in the Program documentation or as otherwise notified by you and not under the terms of the Agreement.
